VEHICLE TRACKING SYSTEM

About Vehicletracking

Vehicletracking is one of the prominent tracking system providers that serve specialized, economic GPS tracking solutions to transportation dependent businesses. The unique hardware and software solutions assist fleet managers to manage fleet business efficiently without creating mayhem. Theft prevention, curtailing of unnecessary fuel expenses, Geo-fencing facility, and augmentation of business efficiency are the important facets of our solutions.

Vehicle
Tracking System

The vehicle tracking solutions we provide

- Route Management – Create optimized routes and manage them effectively to increase efficiency and save time

- Vehicle management – Optimize vehicle usage by assigning the right vehicles to appropriate routes. See vehicle health status and maintenance schedule

- Driver management - Co-ordinate and manage several drivers at a time. Drivers are rated according to their driving habits and performance.

- Live tracking - The apps assist you to discover the real-time location of each vehicle. With the data obtained, you can respond to customer queries swiftly.

- Available on iOS and Android

- Arabic language supported

Our peculiarity- Integration of Artificial Intelligence

1. Auto Routing

- Suggest optimized routes, trips, vehicle assignments, etc.
  based on collection/delivery points shift, pick up point density, and vehicle capacity,

- Perform efficiency check for existing school bus routes

2. Auto Optimization

- Route optimization and collection/delivery point optimization

- Route optimization feature manages multiple delivery points in a single
  route, order intermediate delivery points, and determine the shortest route.

- Collection point optimization feature utilize system intelligence, and historical
  data, and later suggest the exact delivery location with reference to
  their provided address.
